S.No: 15	Exp. Name: ***C program to which performs all operations on Circular linked list.***	Date:2023-06-20

Aim:

Write a program that uses functions to perform the following **operations on Circular linked list**
i)Creation ii)insertion iii)deletion iv) Traversal

Source Code:

AlloperationsinCLL.c

```
#include<stdio.h>
#include<stdlib.h>
struct node{
   int data;
   struct node *next;
};
void insert();
void deletion();
void find();
void print();
struct node *head = NULL;
int main()
{
   int choice;
   printf("CIRCULAR LINKED LIST IMPLEMENTATION OF LIST ADT\n");
   while(1)
   {
      printf("1.INSERT ");
      printf("2.DELETE ");
      printf("3.FIND ");
      printf("4.PRINT ");
      printf("5.QUIT\n");
      printf("Enter the choice: ");
      scanf("%d", &choice);
      switch(choice)
      {
         case 1:insert();break;
         case 2:deletion();break;
         case 3:find();break;
         case 4:print();break;
         case 5:exit(0);
      }
   }
}
void insert()
{
   int x,n;
   struct node *newnode,*temp = head, *prev;
   newnode = (struct node*)malloc(sizeof(struct node));
   printf("Enter the element to be inserted: ");
   scanf("%d", &x);
   printf("Enter the position of the element: ");
   scanf("%d", &n);
   newnode->data = x;
   newnode->next = NULL;
```

```
   if(head == NULL)
   {
      head = newnode;
      newnode->next = newnode;
   }
   else if(n == 1)
   {
      temp = head;
      newnode->next = temp;
      while(temp->next != head)
      temp = temp->next;
      temp->next = newnode;
      head = newnode;
   }
   else
   {
      for(int i = 1; i < n-1; i++)
      {
         temp = temp->next;
      }
      newnode->next = temp->next;
      temp->next = newnode;
   }
}
void deletion()
{ struct node *temp = head, *prev, *temp1 = head;
int key, count = 0;
printf("Enter the element to be deleted: ");
scanf("%d", &key);
if(temp->data == key)
{
   prev = temp -> next;
   while(temp->next != head)
   {
      temp = temp->next;
   }
   temp->next = prev;
   free(head);
   head = prev;
   printf("Element deleted\n");
}
else
{
   while(temp->next != head)
   {
      if(temp->data == key)
      {
         count += 1;
         break;
      }
      prev = temp;
      temp = temp->next;
   }
   if(temp->data == key)
   {
      prev->next = temp->next;
```

```
      free(temp);
      printf("Element deleted\n");
   }
   else
   {
      printf("Element does not exist...!\n");
   }
}
}
void find()
{
   struct node *temp = head;
   int key, count = 0;
   printf("Enter the element to be searched: ");
   scanf("%d", &key);
   while(temp->next != head)
   {
      if(temp->data == key)
      {
         count = 1;
         break;
      }
      temp = temp->next;
   }
   if (count == 1)
   printf("Element exist...!\n");
   else
   {
      if(temp->data == key)
      printf("Element exist...!\n");
      else
      printf("Element does not exist...!\n");
   }
}
void print()
{
   struct node *temp = head;
   printf("The list element are: ");
   while(temp->next != head)
   {
      printf("%d -> ",temp->data);
      temp = temp->next;
   }
   printf("%d -> ", temp->data) ;
   printf("\n");
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
CIRCULAR LINKED LIST IMPLEMENTATION OF LIST ADT 1
1.INSERT 2.DELETE 3.FIND 4.PRINT 5.QUIT 1
Enter the choice: 1
